

Vaccines save lives. You make that happen.

The science is clear. The numbers are staggering. And every pharmacy that prioritizes vaccines is part of one of the most powerful public health tools ever created.

Deaths prevented by vaccines every single year.

5M

That's not a cumulative number. That's the annual impact — approximately 3.5 to 5 million lives saved, year after year, because of routine immunization. (World Health Organization)

Vaccines are one of the most successful public health interventions in history. Since 1924, vaccination has prevented an estimated **103 million cases of disease** in the United States alone — including 26 million cases in just the decade between 2002 and 2011. The momentum has not slowed. And the pharmacist has never been more central to sustaining it.

BY THE NUMBERS — U.S. CHILDHOOD VACCINES, ONE GENERATION OF CHILDREN

508M

Lifetime illness cases prevented among children born over a 30-year span

32M

Hospitalizations avoided — keeping families out of the ER and ICU

1.13M

Deaths prevented in children — by vaccines, in a single generation

Eradication & Elimination

Smallpox was eradicated globally in 1980. Polio and neonatal tetanus are on the brink of elimination — milestones built on decades of consistent immunization.

Protection for the Vulnerable

Community immunity shields people who cannot be vaccinated — newborns, immunocompromised patients, the elderly. When you vaccinate one patient, you protect many others.

Prevention of Chronic Disease

The Hepatitis B and HPV vaccines prevent liver and cervical cancers. Research also suggests vaccines may reduce the risk of cardiovascular events and cognitive decline.

Billions in Economic Savings

Vaccines save billions annually in direct medical costs, lost wages, and caregiver burden. Healthy patients stay productive. Families stay financially intact.

The independent pharmacist is often the most trusted, most accessible healthcare provider in a patient's life. They trust us to walk alongside them in their health journey, and vaccine protection can be a big part of that.
